About us

Blazer® International is a leading provider of DOT, SAE FMVSS108 and Canadian CMVSS 108 compliant and approved vehicular lighting products to the truck, trailer, marine and RV markets. Blazer® lighting products have built a strong reputation in the industry with over 50 years of quality, value and customer service.

The Blazer® brand is strategically positioned to meet the needs of OEM and automotive aftermarket customers across a wide range of lighting products. The Blazer® product line includes clearance markers, stop/tail/turn lights, trailer lights, fog and driving lights, warning and tractor/work lights, license, interior, back-up and utility lights, reflectors, replacement lenses, horns, flashers, replacement bulbs, brackets, grommets and plugs. LED and incandescent bulb options are available across the Blazer® line of lighting products. Innovative new products that include universal stop/tail/turn lights and wireless tow/trailer kits, along with packaging that allows the user to try the product at retail, rounds out the line of products within the Blazer® brand.

Blazer® International is headquartered in Long Grove, Illinois and is a part of the Tiger Accessory Group, a division of MAT Holdings, Incorporated.

Photometric Equipment

Our photometric and validation testing laboratory in Long Grove, Illinois ensures consistent quality and compliance with all of the necessary standards.

Computer controlled goniometer measures light brightness and illumination at the various angles required by US FMVSS 108 and CMVSS188.

Testing Equipment

Temperature and Humidity Chamber

Ensures our lamps will continue to function under the most extreme weather conditions.

Vibration Testing Equipment

Simulates the rough conditions that lamps will go through when mounted on trucks and trailers. It tests to make sure that there is no evidence of material weakness, lens or reflector rotation, and/or displacement that could cause a product to function incorrectly.

Our Commitment to Quality

Testing Equipment

Dust Testing

Performed to confirm that light output will not be affected by road or weather conditions that cause excessive amounts of dust.

Rain Tester

Simulates rain, mist, and road spray, and is used to test for any moisture buildup inside of the light which could cause it to fail during use.

LED Testing Equipment

Is used during incoming inspection to guarantee that LED diodes meet requirements for light output before they are assembled into lighting products.

Salt Spray Tester

Testing is done to ensure that lighting products are corrosion resistant.

LED CLEARANCE MARKERS

Featuring the CW1586A / CW1586R

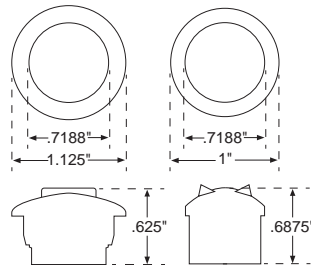

- DOT approved – Meets FMVSS108 and CMVSS 108 Safety Standards ensuring that you are receiving the safest of products
- Made with the latest LED technology, our clearance markers offer long lasting performance
 - Energy efficient – LEDs use 1/10th the amperage draw as incandescent bulbs
 - Durable and shock-proof – LEDs withstand road vibration and shaking
 - Maintenance-free – no bulb changes

TECHNICAL REFERENCE

The following information is provided by the National Highway Traffic Safety Administration. Each diagram will show the specific requirements for that vehicle type.

Every lamp, reflex reflector, and conspicuity treatment (device) must be permanently attached in the location specified on the following pages and must comply with all applicable requirements prescribed for it by FMVSS/CMVSS 108. The face of any device on the front/rear and sides should be, respectively perpendicular and parallel to vehicle centerline, unless it is photometrically certified at installation angle.

In Canada: Manufacturers and importers of vehicles must have the proper certification test records demonstrating compliance of lighting components with all prescribed requirements.
